Business Track: Reducing RTO — Getting More Orders Delivered

meesho DICE CHALLENGE SEASON 3

CASE DATA — ILLUSTRATIVE

100 Total Orders

How the orders split and result in RTO.

COST SPLIT ACROSS NETWORK LEGS

Last-mile is the costliest leg

Cost per order (₹) across the 7 legs — sums to ₹50 (forward logistics cost)

Biggest Reasons Behind RTO, Sized !!

Why 1 in 6 Orders on Valmo Never Reaches the Customer ?

DISTANCE VS FAILURE RATE

RTO risk increases with distance

A higher share of orders are returned undelivered as the distance from the delivery hub increases.

Failure rate is ~1.5x higher for far locations vs nearby.

Distance often correlates with weaker address quality, less-familiar riders and patchier connectivity.

PRIMARY RESEARCH

Why customers refuse COD orders?

Unavailability and change in mind are the top reasons for COD order refusals.

Listening to customers for a smoother tomorrow

Same reasons. Bigger insights.

KEY STATS AT A GLANCE

Small Frictions Big Impact

COST CONCENTRATION

DISTANCE RISK PROGRESSION

PRIMARY RESEARCH: APP TESTING

Even with GPS granted — Pincode, City, and State auto-fill and verify — the single most delivery-critical field stays 100% unvalidated free text.

VOICE OF CUSTOMER

"Paise toh hote hain, but delivery wala khule paise nahi rakhta." — mentioned by 3.8% of respondents

Real voices. Real insights.

DELIVERY PARTNER INTERVIEWS

INDUSTRY CROSS-CHECK

KEY TAKEAWAY

94% of RTO is COD.

The **costliest** leg (LMDC) is also the **riskiest**.

Our own survey confirms the pattern — **this is where the fix needs to focus.**

Focus here. Bigger impact.

Prioritization Framework:
Impact × Feasibility,
Gated by 3 Guardrails

**SECOND-ORDER CHECK**
Stress-testing our top 2 picks before committing

**COD Risk fix**
“What if customers just ignore the flag?”
→ No penalty — order ships as normal COD. **Can't make things worse than today.**

**Address Gap fix**
“What if customers skip the landmark field anyway?”
→ Still safer than today — even partial detail beats today's zero validation.

Priority ≠ Guesswork

PRIORITIZATION FRAMEWORK Our solution shortlist follows 3 non-negotiables

**Cost**
won't exceed savings

**Rider Earnings**
untouched

**Ordering Ease**
no checkout friction

WHY THIS FRAMEWORK? Grounded in operations, customer insights and Valmo's current direction

Riders paid per delivery only — **pre-dispatch fixes automatically pass the earnings gate.**

Our survey confirms **2 distinct refusal drivers**, not one.

Valmo's own hiring pages show **pickup-point infra already in motion.**

WHAT TO FIX FIRST: CAUSE PRIORITIZATION Based on impact, feasibility and guardrails

#	Cause	Impact (1-10)	Feasibility (1-10)	Total (20)	Priority Tier
1	 COD Risk (pre-dispatch)	9	9	18	High
2	 Address Gap (pre-dispatch)	9	8	17	High
3	 Refusal Behavior (pre-delivery)	6	8	14	Medium
4	 Refused-Order Recovery (post-RTO)	5	7	12	Medium
5	 Distance-from-Hub (longer term)	5	5	10	Low

IMPACT vs FEASIBILITY Bigger impact, higher feasibility = higher priority

PRIORITY BREAKDOWN

 **2 High**

 **2 Medium**

 **1 Low**

**SCORING LOGIC**

Impact scored 1-10 relative to each cause's share of total RTO cost/volume (Slide 1); Feasibility scored on whether the fix needs new infrastructure (10 = none needed) vs. new partnerships/systems (lower).

**GEOGRAPHIC CONSIDERATION**

WhatsApp reach is stronger in connected **urban / Tier 2 areas**; low-connectivity zones may require an SMS/IVR fallback.

 →  Different geographies, practical solutions.

**KEY TAKEAWAY**

Two fixes score High priority — **COD Risk** and the **Address Gap** — both pre-dispatch, both guardrail-safe. Everything else waits its turn.

Priority, not guesswork.

 **2 of 5** causes are both high-impact and easy to ship — the foundation for our **quick-win pick**.

Quick Win: First 30 Days

Risk-Scored Confirm & Reschedule Nudge

SECOND-ORDER CHECK

What if the customer ignores it?
Order ships as normal COD.
Zero penalty. Strictly additive.

MAPPED TO THE BRIEF

COD Risk "COD makes refusal easy" > Address Gap "unclear addresses" > Refusal Behavior "customers refuse for many reasons" > Refused-Order Recovery "reduce reverse logistics cost"

17 → 13

~23% relative RTO reduction

16 COD-RTO × 38% addressable × 60% response ≈ 4 recovered

per 100 orders shipped | not-available (25.7%) + half of changed-mind refusals, our survey n=35 | real-world WhatsApp confirmation rate, Shiprocket precedent | conservative estimate, not guaranteed

To be validated: A/B test on a small city/region in Week 2, before full rollout.

HOW WE'LL KNOW IT WORKED

COD RTO rate: 17% → 13%

Address-completion rate: Tracked as new metric — no current baseline

PRIMARY RESEARCH

Most COD customers are reasonably certain about their purchase

A large majority (76%) of respondents were at least somewhat certain when placing the order.

At least somewhat certain

76% (29/38) of respondents were at least somewhat certain when placing the order.

Confident Customers Build Bigger Journeys

meesho Har Zaroorat Ke Liye

EVIDENCE

Strong signals that this can work

Multiple data points and real-world precedents support the impact potential.

94% of RTO is COD, directly targeted.

63%+26% behavioral + availability, one message solves both.

-36% RTO drop, Razorpay/Borosil precedent.

60-70% confirmed via WhatsApp, Shiprocket precedent.

KEY TAKEAWAY

One WhatsApp message, sent only to risky COD orders, before a rider is ever dispatched. Zero cost to the 94% of orders that don't need it — full protection for the ones that do.

Small nudge, big save.

Thank You!
